

Here, I was not sure what n should be set as. Therefore, I set it up as 100.

With this as the condition, I got the computational time 0.295819142041513s for Romberg and 0.468142870286783s using integrals.

As a result, the final answer given from the code was $5.64e-5$ seconds.
